

10,000 of the total population decreasing from 9,871.4 in 1880 to 3,936.1 in 1910. Thus, while in 1880 almost the entire population of Alaska consisted of Indians, in 1910 they formed only about two-fifths of all the inhabitants.

The number of Indians per 10,000 of the total population in 1910, 1900, and 1890 is shown, in Table 6, for each of the 22 states in which in 1910 at least 1,000 Indians were reported. The proportions for 1910 and 1890 are also shown graphically, by states, in the maps below. There were 9 states in 1910 in which the Indians formed as much as 100 per 10,000, or 1 per cent of the population. The states were as follows: Arizona, 1,428.9; Nevada, 640; New Mexico, 628.6; Oklahoma, 451.5; South Dakota, 327.8; Montana, 285.7; North Dakota, 112.4; Idaho, 107.1; and Wyoming, 101.8. It will be noted that Oklahoma, which had by far the greatest Indian population in 1910, occupied fourth place in proportion of Indians to total population, the proportion in that state being less than one-third that in Arizona. The number of Indians per 10,000 total population declined between 1900 and 1910 in all but 4 of the 22 states listed below.
