

Among places of 100,000 or more population, the highest proportion of Pacific Islanders was in Honolulu (16 percent) as shown in Figure 4. Two additional places — West Valley City, Utah, and Hayward, California, — had over 3 percent of their populations reporting Pacific Islander. The ten places with the highest proportions of Pacific Islanders were all in the West.

ADDITIONAL FINDINGS ON THE PACIFIC ISLANDER POPULATION

Which Pacific Islander group was the largest?

According to Census 2000, Native Hawaiian was the largest Pacific Islander group in the United States. This is true for both the alone and alone or in combination populations. There were 141,000 respondents who reported only Native Hawaiian and an additional 261,000 who reported Native Hawaiian with at least one other race or Pacific Islander group. A total of 401,000 people reported Native Hawaiian alone or in combination with one or more other races or Pacific Islander groups (see Table 4).

Samoan and Guamanian or Chamorro were the next two largest specified Pacific Islander groups. There were 91,000 people who reported Samoan alone and an additional 42,000 who reported Samoan in combination with one or more other races or Pacific Islander groups. This gives a total of 133,000 people who reported Samoan alone or in combination with at least one other race or Pacific Islander group. There were 58,000 people who reported only Guamanian or Chamorro and an additional 34,000 who reported Guamanian or Chamorro in combination with one or more other races or Pacific Islander groups. A total of 93,000 people reported Guamanian

Ten Places of 100,000 or More Population With the Highest Percentage of Native Hawaiian and Other Pacific Islanders: 2000

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2000/doc/sf1.pdf)

* Honolulu, HI is a census designated place and is not legally incorporated. See footnote 11. Source: U.S. Census Bureau, Census 2000 Summary File 1.

or Chamorro alone or in combination with at least one other race or Pacific Islander group.

Combined, Native Hawaiians, Samoans, and Guamanians or Chamorro accounted for 74 percent of all respondents who reported a single Pacific Islander group. Of all Pacific Islander groups mentioned in race combinations, these three groups accounted for 71 percent of all responses.

Among the largest Pacific Islander groups, which was most likely to be in combination with one or more other races or Pacific Islander groups?

Of the five largest specific Pacific Islander groups, Native Hawaiians were most likely to report one or

more other races or Pacific Islander groups (see Figure 5). Of all respondents who reported Native Hawaiian, either alone or in combination, 65 percent reported one or more other races or Pacific Islander groups. This included 1.3 percent who reported Native Hawaiian with one or more other Pacific Islander groups, 60 percent who reported Native Hawaiian with one or more other races, and 3.5 percent who reported Native Hawaiian in addition to one or more other races and Pacific Islander groups (see Table 4).

Tongans and Fijians were the least likely to be in combination with one or more other races or Pacific Islander groups. Of all respondents who reported Tongan, 25 percent
